Combine the following ingredients in a bucket:

- 1 gallon warm water
- 2 cups clear Karo syrup
- 1/2 cup chlorine bleach
- 1/2 teaspoon 20 Mule Team Borax
- 1/4 cup vinegar
- 1/4 cup Woolite

- ▲ Cut a half inch off the bottom of tree and place tree trunk in solution for 12 to 24 hours.
- ▲ Then rinse off the trunk and place in water in a standard tree stand.
- ▲ This should be done outside to avoid dripping solution on carpets.
- ▲ Remember, there is bleach in it and it will leave spots if it drips.
- ▲ The solution allows the tree to take up far more water than normal, so make sure you keep the reservoir topped off.
